

CHAINGUARD

LITEPAPER

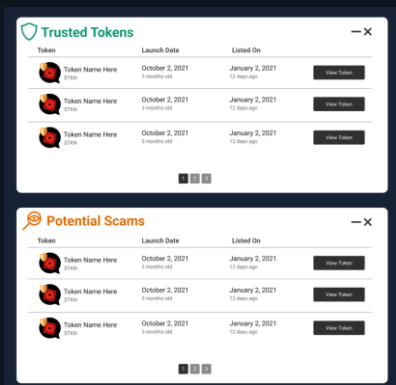

There are few ways to ensure the security of your investments on the Binance SmartChain. Binance itself offers little in the way of assurances – but that’s where ChainGuard comes in. Boasting some of the most powerful autonomous analysis systems within the blockchain space, ChainGuard offers users a unique ability to spot fraudulent projects before investing. Through our combination of free and premium tools, users may enter the Binance ecosystem with a degree of confidence previously unheard of.

We seek to protect, educate, and empower users through our suite of products. Alongside our well-established Telegram Analyzer Bot, ChainGuard offers NFT-minted security certificates for audited tokens, educational videos and a launchpad for quickly and securely deploying your own tokens. We’ve done the research, and now we’re bringing you the tools you need to guard your funds.

Ever vigilant, ChainGuard stands firm against malicious actors on the Binance SmartChain.

You do the research; we provide the information.

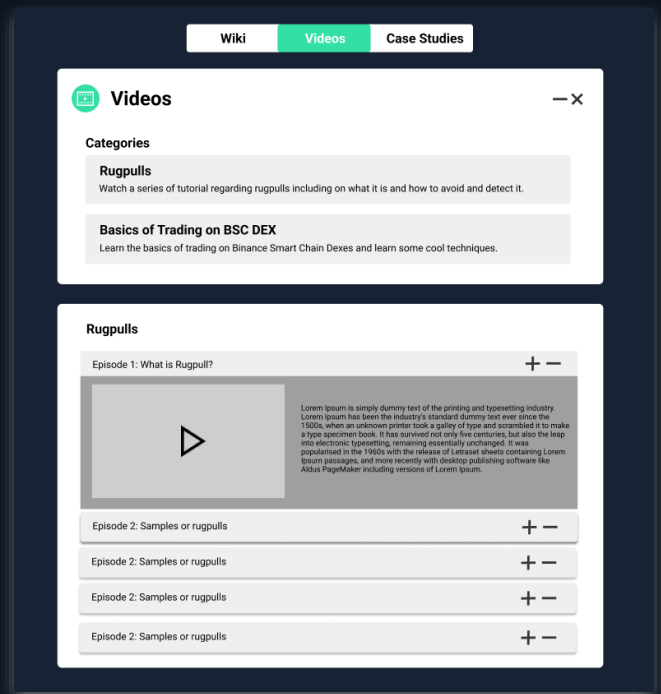

The first rule of investing is to do your own research. Yet, the information available about new projects can vary wildly. Some legitimate projects may have little more than a basic landing page and a functioning product. Conversely, some scams may provide whitepapers, media articles and more. ChainGuard's **Token Portal** provides the raw technical specifications needed to understand a new token's contract.

Through the token portal, users will see a searchable list of projects – clearly labeled and easily parsed – and their status as a legitimate token or a scam. Using our proprietary analysis technology, tokens added to the list have their contract inspected. The token portal will assign appropriate labels to tokens that use intentionally fraudulent code – showing their status as a potential rug pull, a hidden mint function or a honeypot – delayed or not. Legitimate tokens receive the ChainGuard seal of approval.

EDUCATION PORTAL

To further assist users in their journey to wealth, ChainGuard will also provide an educational portal with valuable tutorials. The **ChainGuard Education Portal** serves as the second arm of defense against future threats. A video library, breaking down the 'How' and 'Why' of specific snippets of fraudulent code will help new investors learn how to spot a scam in the wild. Over time, the library will expand to include multiple topics – all empowering investors to make better decisions with their hard-earned funds.

Additionally, ChainGuard will provide post-mortem case studies of prior scams discovered by our suite of tools. These case studies will deep dive into both the technical and psychological aspects of malignant actions on the Binance SmartChain and beyond.

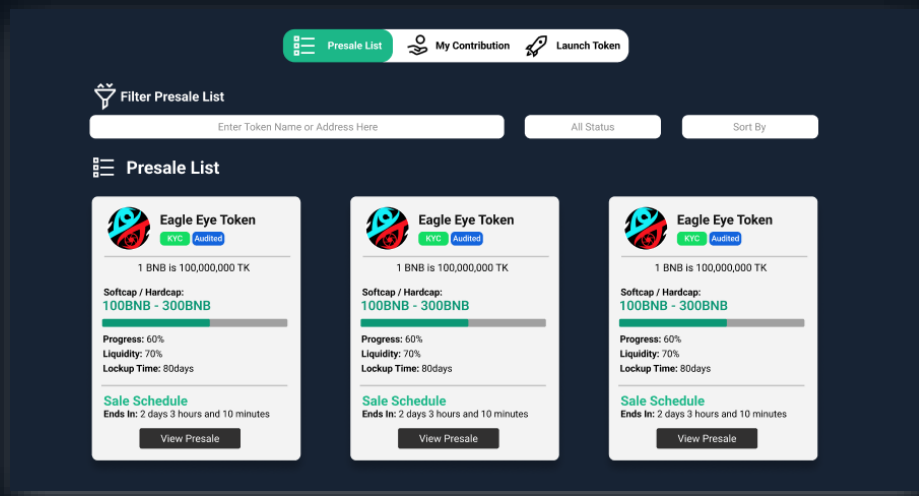

Through understanding scams, we can avoid scams.

At the heart of the new ChainGuard ecosystem lay our web suite. Offering easy-to-use tools that quickly and accurately identify malignant code, the **ChainGuard Web Suite** represents the strongest available protection for users within the Binance SmartChain space. Our premium-level Contract Analyzer brings all the features of our Telegram bot, while adding several new layers of in-depth information. Our liquidity information option lists the location and length of locked liquidity. Beyond this, our new analyzer will identify the owner of a token contract and search for any previous contract deployments – while identifying if those prior deployments constituted a scam project.

As further incentive for ChainGuard token holders, we also provide a web-based decentralized application that allows precision control of reflected rewards. Users may choose to receive their rewards in BNB directly – or in any BSC token of their choosing. Should they decide to compound their rewards back into ChainGuard, they can do so through the dApp to avoid any associated taxes.

LAUNCH PAD

The ChainGuard Token Portal and Web Suite provide a degree of user safety when investing in external tokens – those not associated with ChainGuard. As a further measure of security and to provide new projects with a means of verifying validity, the **ChainGuard Launchpad** allows development teams to build from a dedicated database of secure contracts and launch their token purely within the ChainGuard ecosystem.

This includes a liquidity pool locker available for both ChainGuard Launchpad launched and external projects. Launchpad projects natively integrate the LP locker for ease of development. Further, projects deployed through the launchpad will earn a minted NFT certificate attesting to their status as a ChainGuard-approved project, allowing users to invest without worry.

Any project launched within our ecosystem will also benefit from advice offered by our veteran development team.

CHAINGUARD

The Binance SmartChain is an untamed frontier, offering untold potential profits for the wary – and absolute disaster for the unprepared.

Remain ever vigilant with **ChainGuard**.
